

STUDER 150A 1-in-3-out Battery Splitter

Accessory | STUDER | MBI150-3IG

Without precise current distribution to multiple battery banks, uneven charging and voltage drops compromise system performance. This 150A splitter delivers balanced power to three independent outputs, ensuring optimal charge levels and preventing degradation across separate battery banks.

Features

- Distributes 150A charging current from a single source to three independent outputs, ensuring balanced power delivery to multiple battery banks or loads.
- Engineered for marine, RV, off-grid solar, and commercial vehicle applications requiring flexible and reliable multi-battery system management.
- Provides intelligent power splitting to maintain optimal charge levels and prevent voltage drops across separate battery banks.
- Compatible with 12-24V input voltage ranges, offering versatile integration into existing or new electrical systems.
