

STUDER 200A Battery Splitter 12-24V

Accessory | STUDER | MBI200-2IG

Dual-voltage (12-24V) compatibility and 200A distribution ensure stable power for two independent circuits in fixed/mobile DC systems. This configuration prevents voltage drops and protects electronics by isolating critical loads from a single charging source.

Features

- Distributes up to 200A of charging current from a single source to two separate circuits, ensuring stable power for all connected devices.
- Engineered for dual-voltage systems (12-24V), providing flexible power management in vehicles and vessels with mixed voltage configurations.
- Facilitates clean power distribution, preventing voltage drops and protecting sensitive electronics by isolating circuits.
- Robust construction designed for demanding mobile and off-grid applications, ensuring reliable operation in challenging conditions.
