

Heavy-Duty Terminal Clamp 16-35mm²

Connector | MATERIAL | PB.22740

Low contact resistance across 16-35mm² cables minimises voltage drop, ensuring stable power transfer for critical electrical systems. Its vibration and corrosion resistance provides a secure connection point for starter, charger, and tester accessories, guaranteeing operational continuity.

Features

- Ensures stable and efficient power transfer for critical electrical systems, minimizing voltage drop across 16-35mm² cables.
- Engineered for reliable performance in automotive, marine, and recreational vehicle environments, resisting vibration and corrosion.
- Provides a secure and durable connection point for starter, charger, and tester accessory systems, ensuring operational continuity.
- Robust construction guarantees longevity and consistent connectivity in mobile and marine applications.
