

M8 Negative Terminal Clamp for Starters & Chargers

Connector | MATERIAL | PB.28342

An M8 negative terminal clamp ensures secure connectivity, preventing power interruptions crucial for engine starting and battery charging operations. This component integrates stably within automotive, marine, and caravan electrical systems to facilitate consistent power transfer.

Features

- Ensures a secure M8 negative connection for reliable engine starting and battery charging operations.
- Engineered for dependable performance in automotive, marine, and caravan/camper electrical systems.
- Facilitates stable power transfer for starter, charger, and tester equipment, crucial for diagnostics.
- Robust construction designed for durability and secure fitment in vibration-prone environments.
