

M10 Negative Terminal Clamp for Battery Systems

Connector | MATERIAL | PB.28362

Without a secure connection for critical starting and charging, systems risk intermittent power loss and component damage. This M10 negative terminal clamp provides a robust, corrosion-resistant link, ensuring stable power transfer for demanding automotive, marine, and RV applications.

Features

- Ensures secure and reliable power transfer for critical starting and charging circuits.
- Designed for demanding automotive, marine, and recreational vehicle environments.
- Provides a robust and durable connection point for M10 battery terminals.
- Safeguards against power loss and connection degradation in high-vibration scenarios.
