

STUDER RS232 Communication Module

Accessory | STUDER | Xcom-232i

Mobile and marine system management requires secure data communication for reliable remote control. Galvanic isolation of the RS232 interface prevents electrical disturbances, ensuring stable system operation and equipment longevity.

Features

- Isolated RS232 communication ensures secure and interference-free data exchange for remote system management.
- Engineered for reliability in challenging mobile and marine environments, including automotive, caravans, and boats.
- Galvanic isolation protects connected equipment from electrical disturbances, ensuring system stability and longevity.
- Includes a 2-meter cable for straightforward integration and flexible installation within your energy system.
